

IMA-65 Specialty Media

is a revolutionary silica sand based filtration media designed for the removal of iron and manganese without the use of potassium permanganate. The unique micro porous structure of IMA-65 efficiently removes dissolved iron to as low as 0.005 ppm and manganese to 0.001 ppm. After initial activation, the IMA-65 acts as an oxidation catalyst with immediate oxidation and filtration of the insoluble precipitates. The media has been used extensively in a wide variety of applications in Japan for over 30 years. IMA-65 has been tested and certified by the Water Quality Association in accordance with NSF/ANSI 61.

Advantages

- Eliminates Potassium Permanganate - Operates with continuous injection of sodium hypochlorite at low residual levels (0.1 to 0.3 ppm).
- Wide pH range - Stable and satisfactory performance at pH 5.8 to 8.6.
- High Flow Rates - IMA-65 can operate at linear filtration velocities up to twice that of conventional media with a corresponding reduction in capital equipment costs.
- Higher Operating Temperatures - Maximum operating temperature of 113 °F (45 °C).
- Long Life - IMA-65 is not consumed in the process, providing considerable advantages over other processes or media.
- Regeneration Not Required - After initial activation, only sodium hypochlorite feed is required.
- System Compatibility - Physical properties are similar to that of competitive media, allowing conversion to IMA-65 without major hardware modifications.
- Arsenic Removal - IMA-65 has been shown to be effective in the removal of arsenic associated with iron-containing influent. If necessary, ferric chloride can be introduced to treat waters with low influent iron levels or to enhance removal when treating waters with high levels of arsenic.

IMA-65 Specialty Media Specifications

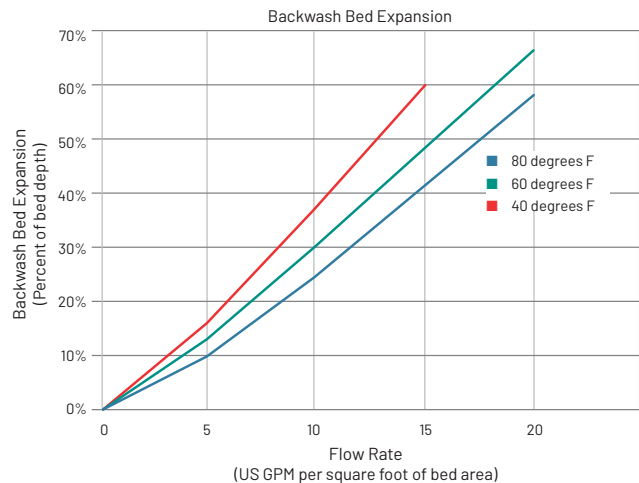

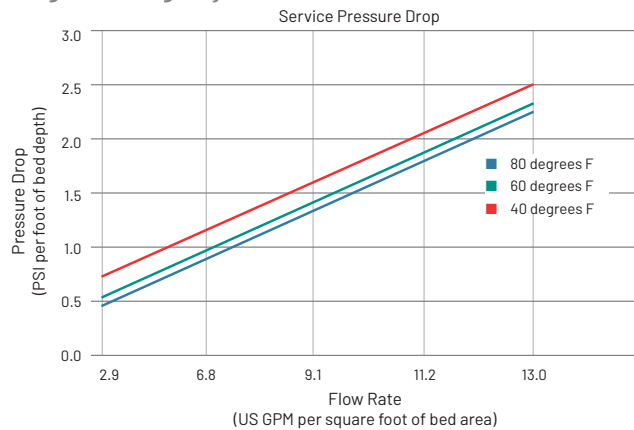

SPECIFICATIONS IMA-65 SPECIALTY MEDIA			
Physical Properties		Operating Conditions	
Color	Brown to black	pH range	5.8 - 8.6
Bulk density	92.0 lbs./cu. ft.	Maximum water temp	113 °F (45 °C)
Specific gravity	2.7	Minimum bed depth	24 inches (600 mm)
Effective size	0.48	Freeboard	40% minimum
Uniformity coefficient	<1.8	Service flow rate	2 - 12 gpm per sq. ft.
Mesh size	20 - 45	Backwash flow rate	10 - 20 gpm per sq. ft.
Annual attrition	1-5%	Backwash expansion	15 - 50%
